Strengthening Immune Functions with Super Immune Transfer Factor (SITF)

A IMMI24 Innovation comprising natural and nano sized Immunotherapeutic ultrafiltrates as safe and effective adjuvant to immune restoration.

IMMI24 BV – Emmerikseweg 19b – NL7041AV `s-Heerenberg Netherlands

Technical Description of Dimension 6

Super Immune Transfer Factors are molecules that communicate antigenic immunological information intercellularly and from a donor to a recipient.

SITF produced by lymphocytes and serve to support and improve cell mediated immunity. Mamalian TF's including those of humans are small molecules between 3500 and 10.000 daltons.

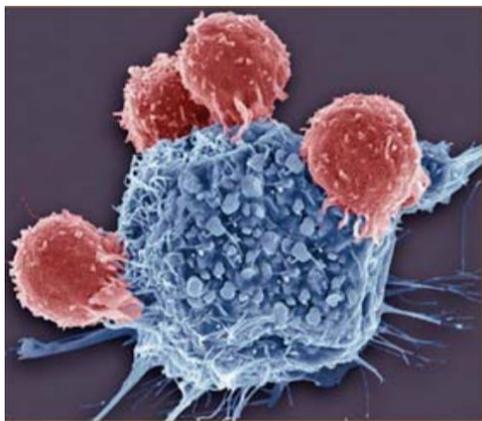

Super Immune Transfer Factors are polypeptides that consist 40 to 44 amino acids and have variable region and conserved amino acid region, which determines the antigenic specificity for an estimated 818 epitopes and serves as a binding target for immune cell receptors respectively.

These highly conserved regions allow SITF to be administered across a species barrier without any loss of potency.

Clinical studies have demonstrated that SITF's unique antigen specific effect is well documented and is likely produced through activation of T-Cells, increase macrophage activation and interleukin production which also enhance **Natural Killer Cell** funktion.

Clinical test of SITF on antigen mediated immunity, via B-Cell has reported significant increase of antibodies.

Mechanism of Dimension 6

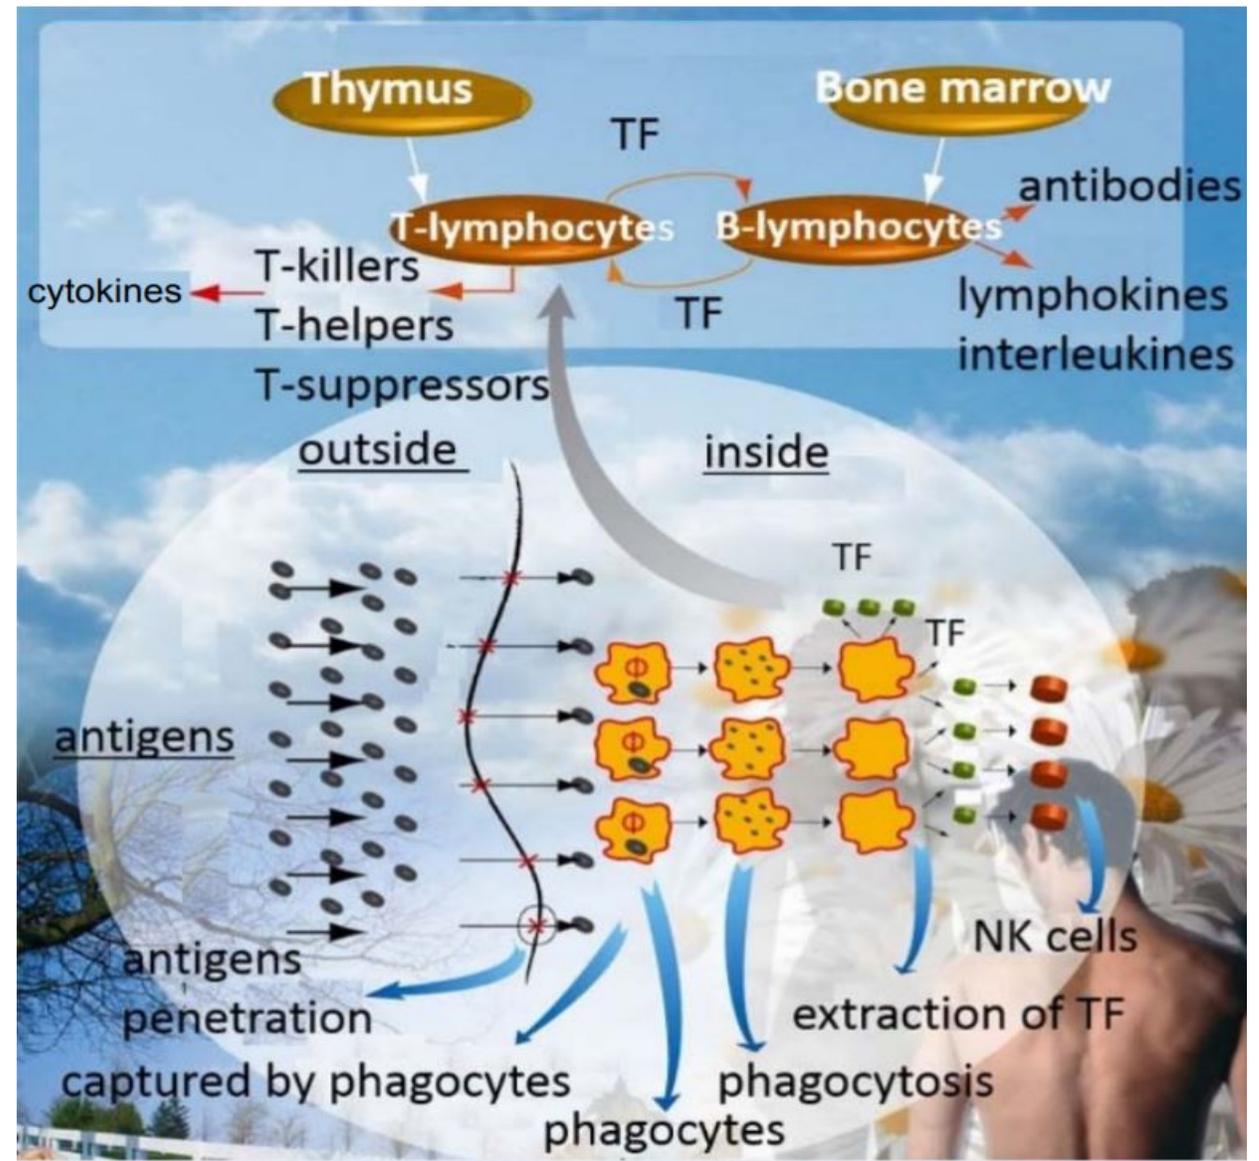

SITF teaches immune system to recognise a threat, Respond and Remember.

SITF is made of 3 separate fractions:

1. **Inducer** (provides overall readiness of the immune system to repel aggression)
2. **Antigen Specific** (allowing body more quickly respond to similar health threats)
3. **Suppressor Fraction** (to calm the immune system back to a normal level preventing autoimmune disorders).

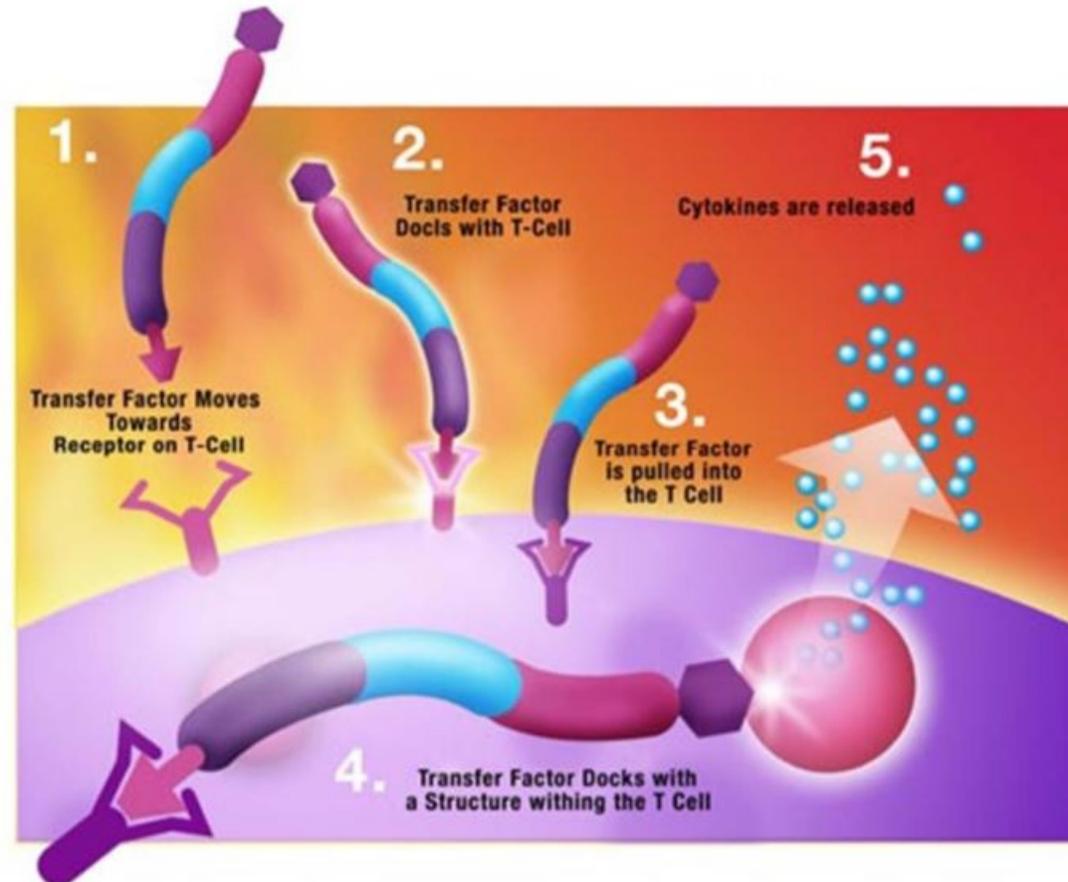

Production and Function of Dimension 6

SITF provides immune intelligence

It is the immune information and education that helps to focus the immune system, keeping on task and effective.

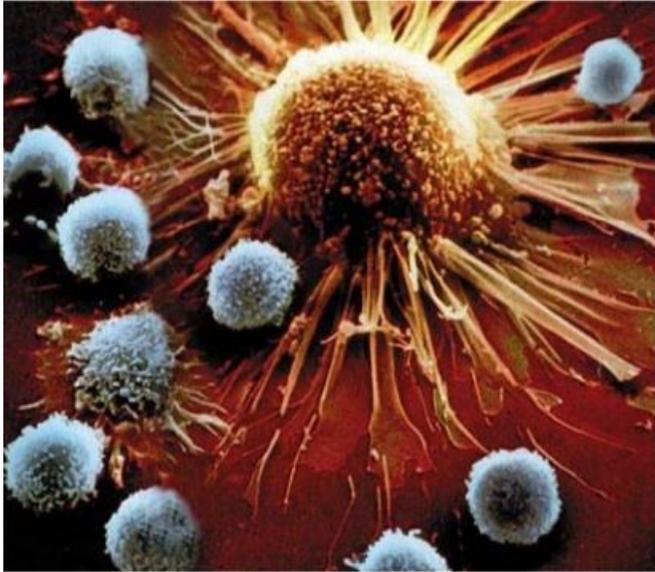

Stimulating Natural Killer Cells

Transfer Factors are stimulating the activity of Natural Killer (NK) cells, they control viral infections including HIV/Aids and Tumors. The NK Cell is a unique type of lymphocyte as it needs no priming or education to function as the T- or B-Lymphocytes do.

They recognise foreignness and rapidly destroy them. This role of NK Cells is critical for immune succes particularly because T-Cells are unable to recognise pathogens in the abcense of surface antigens.

NK-Cells provide rapid response to virally infected cells and respond to Tumor formation, acting around 3 days after infection.

Independent Laboratory studies have shown that TF`s in isolated form alone and TF`s in combination with other compounds increase immune potency by stimulating NK-Cells activity more than any other natural supplement on the market.

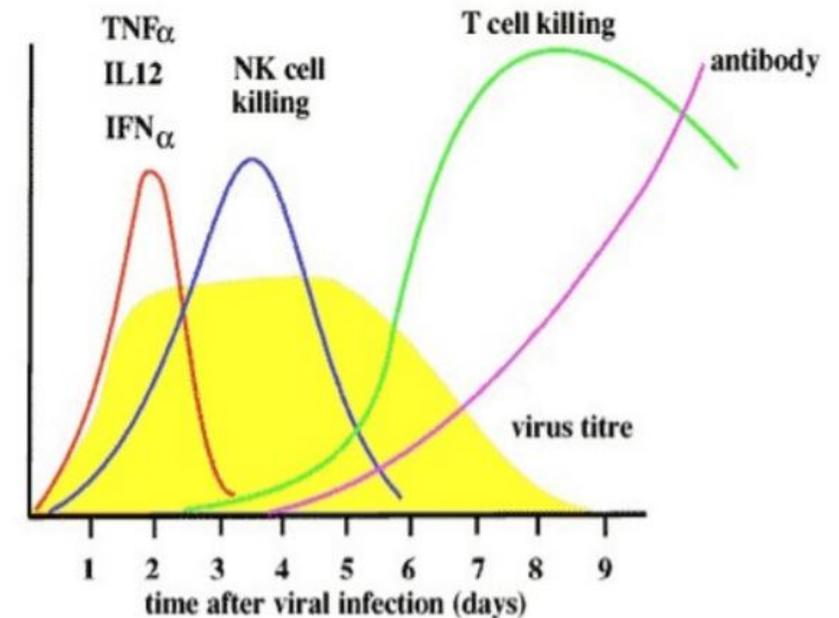

Time Line of Immune response

In a matter of one day after a new viral infection, the cytokines are in action and soon thereafter the NK-Cell activity increases and peaks.

At this peak the total viral load plateaus. This plateau is due to the action of the NK-Cells killing virally-infected cells and stopping replication of the virus.

It is now clear that early and effective NK-Cell function is critical and determines the outcome and duration of an illness.

Health Implications

Immunotherapy with Dimension 6

Supplementing immune function provide with ability to move the NK-Cell peak activity from hours to days earlier.

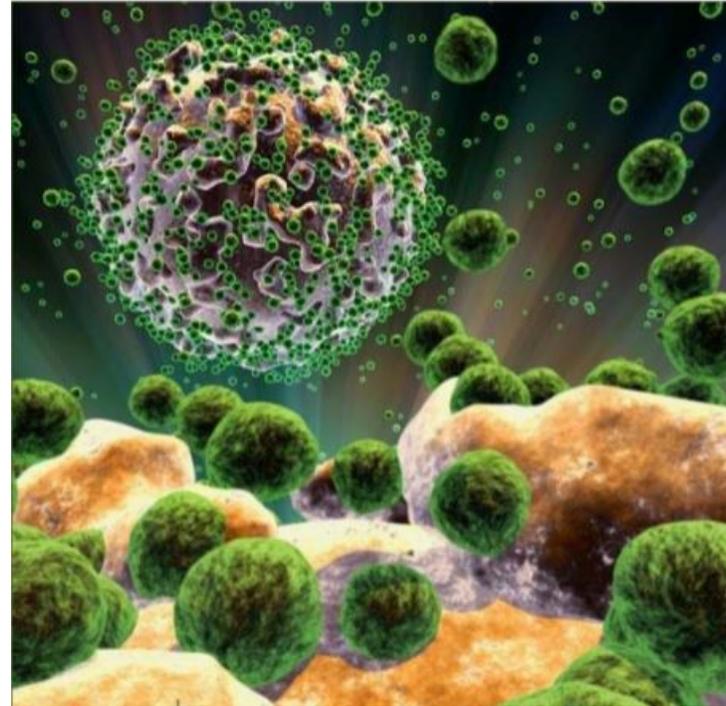

The amazing implication is that with improved NK function, infection without illness is possible as tumor recognition and destruction before the tumor becomes recognized as disease.

Prevention is indeed the key and available to everyone through SITF.

SITF`s have been shown to greatly enhance and strenghten immune response against:

- Viral
- Bacterial
- Parasitic
- Autoimmune
- Mycobacterial
- Fungal
- Malignant and
- Neurological diseases

Changes in immune system by Age

- Progressive atrophy of Thymus and all Lymphoid tissue (spleen, lymph nodes)
- Decrease of T-helpers and T-suppressors = stimulation of autoimmune reactions
- Decrease in antitumor resistance
- Decrease in antigenic activity of lymphocytes

Modifying Biological Age with Dimension 6

There is a strong correlation between the weak immune system and aging.

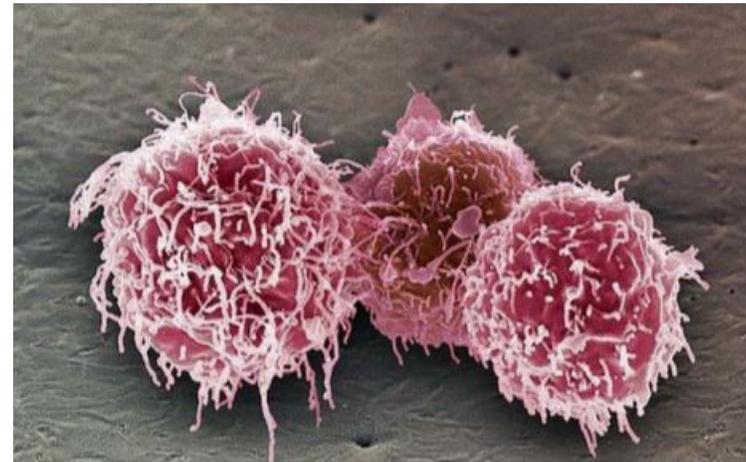

In the study conducted by National Gerontology Research Center, Moscow Patients TF`s were given 300mg daily with meals 5 times a week for 6 weeks.

- System functions were significantly normalized.
- After the course of TF`S the biological age decreased from chronological and rejuvenation effect made up 4-8 years.

Rejuvenation and Anti-Aging effect of Dimension 6

- Normalize immune system
- Increase cell restoration
- Increase physical condition
- Improve tissue repair capacity
- Anti-stress effect to immunity
- More energy
- More strenght
- Metabolism and mechanism of ageing
- Protective impact to the age and diet induced obese

The Importance of Dimension 6

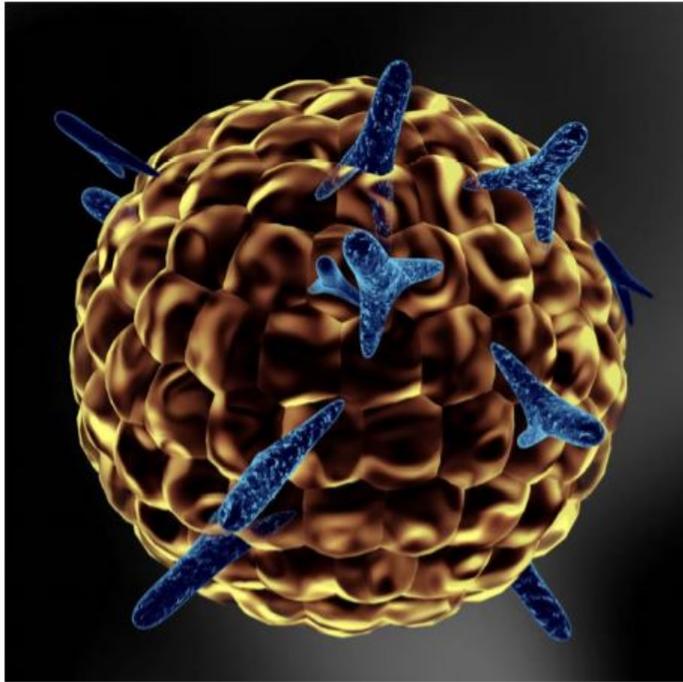

SITF is the safest and most effective weapon available – act very quickly before the enemy has a chance to multiply and gain strength.

SITF speed up the critical recognition stage.

An immature immune response can take 10 to 14 days to fully develop. The issue of Biotherapy reported that Transfer Factors can stimulate a response in less than 24 hours.

Greg B. Wilson, Ph.D. and
James B Daily, Jr Ph. D.
Transfer Factors and
Immunity. Healthy &
Natural Journal Okt.1999

This transfer of immunity was similar to a vaccination, except the recipient was never exposed to the pathogen and had none of the side effects associated with vaccination.

There was no time delay as in associated with a vaccination.

immunity was obtained almost immediately.

Dimension 6 is used for infectious conditions in people with weak immune systems

These infectious conditions include bacteria or viruses in the blood stream (septicemia), sinus infections, bronchitis, influenza, swine flu, the common cold, shingles/herpes zoster, chickenpox, hepatitis B, fungal infections, yeast infections (candidiasis), parasitic infections such as Leishmaniasis.

SITF`s are also used against infections caused by viruses such as cytomegalovirus (CMV) and Epstein-Barr virus; by Bacteria such as Mycobacterium tuberculosis, Mycobacterium fortuitum and Mycobacterium avium also by yeast-like fungus such as Cryptococcus and Pneumocystes.

Administration of Dimension 6

Diabetes, Autism, infertility, systemic lupus erythematosus (SLE), fibromyalgia, chronic fatigue syndrome (CFS), Behcet`s syndrome, balding and Alzheimer disease.

Skin conditions including psoriasis, allergic dermatitis.

Eye condition called retinitis pigmentosa, amyotrophic lateral sclerosis(ALS, Lou Gehrig`s disease), multiple sclerosis, Atherosclerosis, bone cancer, lung cancer, Melanoma, food and chemical allergies, myasthenia gravis and Asthma.

Dimension 6

Super Immune Transfer Factor

Therapeutic Benefits

- Activate macrophages and speed up recognition of antigens by macrophages.
- Stimulate complete phagocytosis.
- Strengthen tissue immunity by stabilizing cell membranes by increasing adhesion of beneficial microflora.
- Promote quick elimination of viruses
- Reduce immunosuppression, induced by xenobiotics, pharmaceutical drugs and cancerogenes.

Therapeutic Benefits

- Sharply decrease the frequency of exacerbations of chronic disease, improve quality of life.
- Also improve the efficacy of antibacterial and antiviral drugs, well suitable with all traditional therapy medications and even reducing requirement for them.
- Compatible with chemo- and xray therapy for oncology patients, reduce side effects, toxic complications and increase immunity.
- Don't cause hypersensitivity/allergy, none side effects and contraindications.

Why Dimension 6

SITF`s are beneficial for men, women and children of all ages, but those most in need are persons with a compromised or under active system.

People with chronic fatigue, fibromyalgia, recurrent bacterial, viral infections and Chronic yeastinfections are definitely in need of immune support.

SITF`s are also beneficial for prophylactic use as we are in contact with pathogens all the time.

Dimension 6

Dimension 6 (SITF) is one of the important discovery in the history of preventive medicine

Administration of Dimension 6
1 to 2 vials injection IM a week – 1package 10 vials
